

TABLE OF CONTENTS

Preface	xi
Notation	xiii
0 General considerations	1
0.1 Part one	1
0.2 Part two	2
0.3 Part three	2
Part I: BASIC THEORY	
1 Basics	9
1.1 Symbols and notation	9
1.2 Definitions	10
1.3 Recurrence relations	13
1.4 Equivalence transformations	15
1.5 Contractions and extensions	16
1.6 Continued fractions with prescribed approximants	18
1.7 Connection between continued fractions and series	19
1.8 Periodic and limit periodic continued fractions	21
1.9 Tails of continued fractions	23
1.10 Continued fractions over normed fields	26
1.11 Generalisations of continued fractions	28
2 Continued fraction representation of functions	29
2.1 Symbols and notation	29
2.2 Correspondence	30
2.3 Families of continued fractions	35
2.4 Correspondence of C-fractions	39
2.5 Correspondence of P-fractions	40
2.6 Correspondence of J-fractions and T-fractions	41
2.7 Correspondence and three-term recurrences	42
3 Convergence criteria	45
3.1 Some classical theorems	45
3.2 Convergence sets and value sets	47
3.3 Parabola and oval theorems	49

3.4	Correspondence and uniform convergence	52
3.5	Periodic and limit periodic continued fractions	53
3.6	Convergence and minimal solutions	56
4	Padé approximants	59
4.1	Definition and notation	59
4.2	Fundamental properties	60
4.3	Connection with regular C-fractions	64
4.4	Connection with P-fractions	65
4.5	Extension of the Padé table	67
4.6	Connection with M-fractions and the M-table	68
4.7	Convergence of Padé approximants	70
4.8	Formal orthogonality property	72
5	Moment theory and orthogonal functions	77
5.1	Moment theory	77
5.2	Stieltjes transforms	85
5.3	Construction of solutions	90
5.4	Orthogonal polynomials	91
5.5	Monic orthogonal polynomials on \mathbb{R} and J-fractions	92
5.6	Szegő polynomials and PPC-fractions	100
5.7	Orthogonal Laurent polynomials and APT-fractions	102

Part II: NUMERICS

6	Continued fraction construction	107
6.1	Regular C-fractions	107
6.2	C-fractions	113
6.3	S-fractions	114
6.4	P-fractions	114
6.5	J-fractions	120
6.6	M-fractions	122
6.7	Positive T-fractions	124
6.8	Thiele fractions	125
7	Truncation error bounds	129
7.1	Parabola theorems	129
7.2	The oval sequence theorem	131
7.3	The interval sequence theorem	136
7.4	Specific a priori bounds for S-fractions	138
7.5	A posteriori truncation error bounds	140

7.6	Tails and truncation error bounds	143
7.7	Choice of modification	143
8	Continued fraction evaluation	149
8.1	The effect of finite precision arithmetic	149
8.2	Evaluation of approximants	152
8.3	The forward recurrence and minimal solutions	154
8.4	Round-off error in the backward recurrence	156
Part III: SPECIAL FUNCTIONS		
9	On tables and graphs	163
9.1	Introduction	163
9.2	Comparative tables	163
9.3	Reliable graphs	168
10	Mathematical constants	175
10.1	Regular continued fractions	175
10.2	Archimedes' constant, symbol π	176
10.3	Euler's number, base of the natural logarithm	178
10.4	Integer powers and roots of π and e	180
10.5	The natural logarithm, $\ln(2)$	181
10.6	Pythagoras' constant, the square root of two	183
10.7	The cube root of two	183
10.8	Euler's constant, symbol γ	185
10.9	Golden ratio, symbol ϕ	185
10.10	The rabbit constant, symbol ρ	186
10.11	Apéry's constant, $\zeta(3)$	188
10.12	Catalan's constant, symbol C	189
10.13	Gompertz' constant, symbol G	190
10.14	Khinchin's constant, symbol K	190
11	Elementary functions	193
11.1	The exponential function	193
11.2	The natural logarithm	196
11.3	Trigonometric functions	200
11.4	Inverse trigonometric functions	204
11.5	Hyperbolic functions	210
11.6	Inverse hyperbolic functions	213
11.7	The power function	217

12	Gamma function and related functions	221
12.1	Gamma function	221
12.2	Binet function	224
12.3	Polygamma functions	229
12.4	Trigamma function	232
12.5	Tetragamma function	235
12.6	Incomplete gamma functions	238
13	Error function and related integrals	253
13.1	Error function and Dawson's integral	253
13.2	Complementary and complex error function	261
13.3	Repeated integrals	268
13.4	Fresnel integrals	269
14	Exponential integrals and related functions	275
14.1	Exponential integrals	275
14.2	Related functions	285
15	Hypergeometric functions	291
15.1	Definition and basic properties	291
15.2	Stieltjes transform	295
15.3	Continued fraction representations	295
15.4	Padé approximants	309
15.5	Monotonicity properties	313
15.6	Hypergeometric series ${}_pF_q$	315
16	Confluent hypergeometric functions	319
16.1	Kummer functions	319
16.2	Confluent hypergeometric series ${}_2F_0$	330
16.3	Confluent hypergeometric limit function	333
16.4	Whittaker functions	334
16.5	Parabolic cylinder functions	337
17	Bessel functions	343
17.1	Bessel functions	343
17.2	Modified Bessel functions	356
18	Probability functions	371
18.1	Definitions and elementary properties	371
18.2	Normal and log-normal distributions	373
18.3	Repeated integrals	377
18.4	Gamma and chi-square distribution	378

18.5	Beta, F- and Student's t -distributions	382
19	Basic hypergeometric functions	391
19.1	Definition and basic properties	391
19.2	Continued fraction representations	395
19.3	Higher order basic hypergeometric functions	399
	Bibliography	401
	Index	421
